

Hawk Congratulates Their 2015 Summer Interns!

"Hawk Technology Ltd's internship program this summer was a huge success, it was very rewarding for Hawk Technology Ltd as well as the students who participated.

Hawk was founded on innovation and technology, the interns learned what we do, and were also able to bring fresh ideas to our company. We wish our interns well on their journey and we are excited to see what next year brings!"

Meet Our 2015 Interns

Congratulations to all of our great 2015 Interns. Hawk Technology, Ltd. is proud to sponsor an Intern program where we provide hands on learning opportunities for bright students and they share their fresh ideas and enthusiasm with us.

Allie

Allie is a Sophomore majoring in Business/HR at Kirkwood College. She was a 3rd year Intern at Hawk and enjoyed having assigned tasks and felt like a useful, directed part of our team.

Alexis

Alexis is a Junior majoring in Communications at St. Louis University. She really liked being able to collaborate with different departments. Although she did not have any previous experience in a manufacturing company she found it very interesting.

Brooke

A Sophomore at the University of Wisconsin, Brooke is majoring in Occupational Safety/Business. This is the first time she has worked in a manufacturing environment and felt that she learned a lot. She appreciated that she was able to really make a contribution.

Mitch

A Senior majoring in BSME and BSIE, he liked working with various people and with the shop to understand how the design side ties into the build side. Learning about the real world application has made a big difference!

Michael

Michael is a Senior at Bradley University majoring in Mechanical Engineering. While he had experience in 3D design and simulation, ProE and AutoCad, Michael had not used it in the workplace. He was very appreciative that at Hawk was able to do 'real work' instead of just reading about it.

Nate

Nate is a Sophomore attending BlackHawk Community College and majoring in Electronics Engineering Technology. He really liked feeling part of the team at Hawk and will be continuing to work in the assembly department part time.

Hawk Technology Ltd.

Hawk Technology Ltd.'s group of industry leading company's is actively looking for new challenging projects to assist you with. From our standard line of versatile positioners, high end robotic automation, to low cost machining capabilities we are here to help with any manufacturing challenge you face.
